

Task 1: Use the apt package manager to install the VLC media player on your Linux system, then verify the installation by running `vlc --version` in the terminal.

Ans :-

Step 1: Enable the EPEL and RPM Fusion repositories (if not already enabled)

```
sudo dnf install epel-release -y
```

```
sudo dnf install https://download1.rpmfusion.org/free/el/rpmfusion-free-release-9.noarch.rpm -y
```

Step 2: Install VLC

```
sudo dnf install vlc -y
```

Step 3: Verify the installation

```
vlc --version
```

You should see output similar to:

```
VLC media player 3.x.x Vetinari
```

```
...
```

Task 2: Update all installed packages on your Linux system using the appropriate package manager command, and take a screenshot of the output showing at least one package being upgraded.

Ans :-

Run:

```
sudo dnf update -y
```

or

```
sudo dnf upgrade -y
```

If updates are available, you'll see output like:

Upgrading:

```
kernel
```

```
openssl
```

```
firefox
```

Task 3: Remove the nano text editor from your system using the package manager, then confirm it has been removed by attempting to run nano in the terminal.
Hint: Use apt remove or yum remove depending on your Linux distribution.

Ans :-

Remove Nano

```
sudo dnf remove nano -y
```

Verify Removal

```
nano
```

Expected output:

```
bash: nano: command not found
```

Task 4: List all installed packages on your system and filter the results to show only packages related to 'python'.
Hint: Use grep to filter the output of your package manager's list command.

Ans :-

Run:

```
dnf list installed | grep python
```

Example output:

```
python3.x86_64
```

```
python3-libs.x86_64
```

```
python3-pip.noarch
```

```
python3-setuptools.noarch
```

Take a screenshot of the results.

Task 5: Use ChatGPT or Copilot to generate the command needed to clean up unused packages and dependencies on your Linux system, then run the command and share the result.
Hint: Ask the AI tool:

'What is the command to remove unused packages in Ubuntu/Debian?' and try it on your system.

Ans :-

`sudo dnf autoremove -y`

If nothing needs to be removed, you'll see something like:

Dependencies resolved.

Nothing to do.

Complete!

If unused packages exist, DNF will list and remove them
